

Hi,

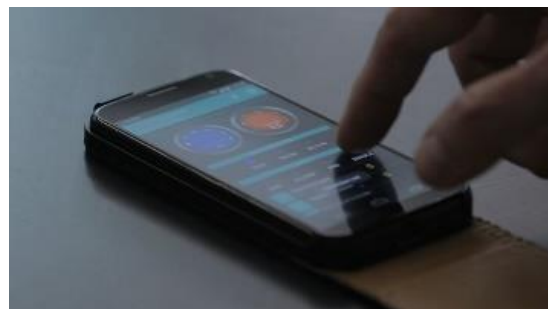

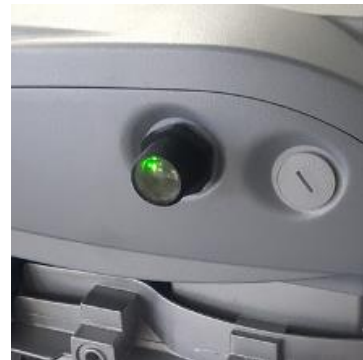

The apps Motive NEO and Motive NANO have been completed

also for IOS

Once they were only for the standard "speed control" mode, but now we extended their use to the control modes [NEO-COMP](#) / NANO-COMP (for compressors) , [NEO-VENT](#) / NANO-VENT (for ventilation) , NEO-OLEO / NANO-OLEO (for hydraulic power packs)
Thanks also to BLUE, motive bluetooth transmitter for [NANO \(single phase VSD up to 2.2kW\)](#) and [NEO \(three phase VSD up to 22kW\)](#), you can now easily make the setting and control NANO or NEO via tablets or

smartphones.

Of course these apps are free

I remain at your disposal for any clarification
