**FITUR DESAIN**

Tidak diminta pemasangan awal bagian apa pun pada poros motor.

Unit pra-tahap tidak dapat digunakan sendiri, tetapi hanya digabungkan dengan BOX.

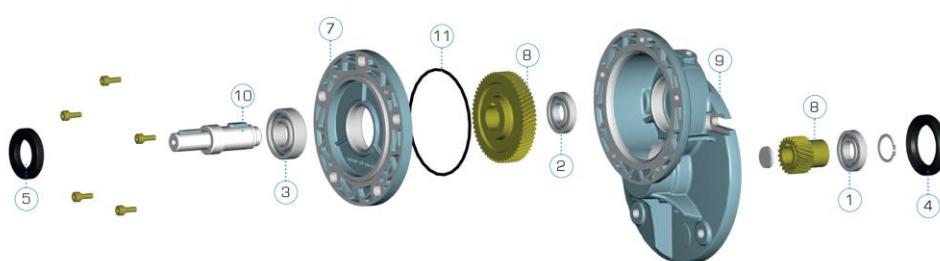

Tidak ada pemeliharaan berkala.

**DESIGN FEATURES**

It is not requested any part pre-mounting on the motor shaft.

The pre-stage unit cannot be used by itself, but only coupled with BOX.

No periodical maintenance is requested.

## PEMILIHAN UKURAN GEARBOX

Faktor Layanan  $f_{sr}$  adalah nilai numerik yang menggambarkan gearbox tugas pelayanan. Faktor pelayanan  $f_s$  adalah yang ditawarkan oleh gearbox pada torsi input terukur Nm dan kecepatan rpm motor.  $f_s$  harus  $\geq$  dari  $f_{sr}$ .

$f_{sr}$  mempertimbangkan parameter seperti:

- jam kerja harian **h/d**
- klasifikasi beban, dan momen inersia dari massa yang didorong.
- Jumlah permulaan per jam **s/h**
- Adanya motor rem,
- Pentingnya aplikasi dalam hal keamanan, misalnya mengangkat bagian

Kapanpun torsi pengenal gearbox  $M_{n2}$  lebih tinggi dari meminta satu  $M_{r2}$ , faktor pelayanan yang dinilai dapat ditingkatkan sesuai dengan rumus:

$$f_s \text{ nyata} = \frac{f_s \text{ pada tabel} \cdot M_{n2} \text{ pada tabel}}{M_{r2}}$$

Nilai  $f_s$  yang sebenarnya harus  $\geq f_{sr}$

Untuk perhitungan seperti itu kami merekomendasikan penggunaan Motive konfigurator

<http://www.motive.it/en/configuratore.php>

Mempertahankan faktor servis yang sama, jika gearbox tunduk mulai dari kedua arah putaran, Anda harus menguranginya torsi terukur Nm sebesar 25%

## GEARBOX SIZE SELECTION

The Service factor  $f_{sr}$  is a numeric value describing the gearbox service duty. The service factor  $f_s$  is the one offered by the gearbox at the rated input torque Nm and speed rpm of the motor.  $f_s$  must be  $\geq$  of the requested one  $f_{sr}$ .

$f_{sr}$  takes into consideration parameters like:

- the daily working hours **h/d**
- the load classification, and then the moment of inertia of the driven masses.
- The number of starts per hour **s/h**
- The presence of brake motors
- The significance of the application in terms of safety, for example lifting of parts

Whenever the rated torque of a gearbox  $M_{n2}$  is higher than the requested one  $M_{r2}$ , the rated service factor can be increased according to the formula:

$$f_s \text{ real} = \frac{f_s \text{ on the table} \cdot M_{n2} \text{ on the table}}{M_{r2}}$$

It is such real value of  $f_s$  that must be  $\geq f_{sr}$ .

For such calculations we recommend the use of Motive configurator <http://www.motive.it/en/configuratore.php>

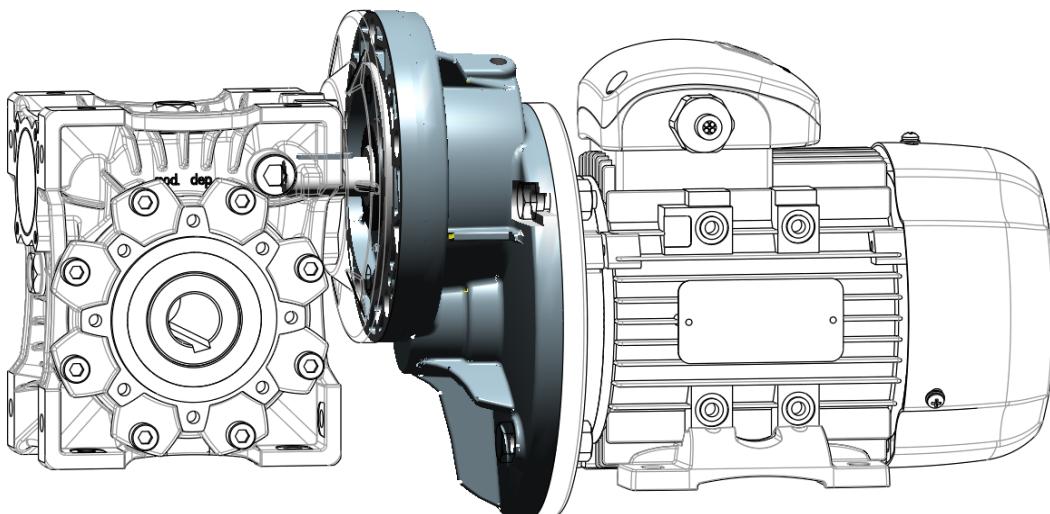

Keeping the same service factor, if a gearbox is subject to starting in both directions of rotation, you must decrease the rated torque Nm of 25%

## PENGENCANG

Pengencang penghubung STADIO ke BOX gearbox worm adalah disertakan pada setiap BOX.

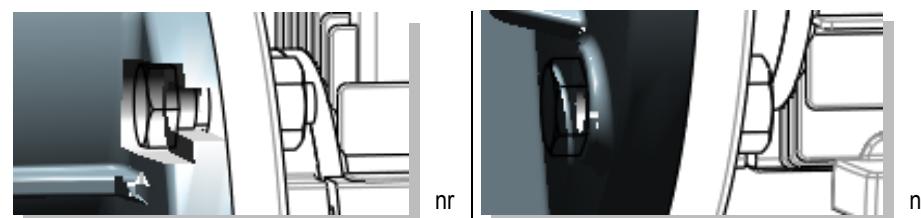

Pengencang penghubung STADIO ke motor disediakan dengan setiap TAHAP. Mereka termasuk 4 sekrup, mesin cuci penanam dan gila. Pengukuran tercantum di bawah ini.

## FASTENERS

The connecting fasteners of STADIO to BOX worm gearbox are supplied with each BOX.

The connecting fasteners of STADIO to the motor are supplied with each STADIO. They include 4 screws, grower washers and nuts. Measures are listed below.

STADIO-63	M8X25	2	nr	M8X35	2
STADIO-71	M8X25	2		M8X35	2
STADIO-80	M10X35	2		M10X45	2
STADIO-90	M10X35	2		M10X45	2

## PEMERIKSAAN RUTIN

**Setiap 3.000 jam kerja, dan setidaknya setiap 6 bulan:**

- periksa level oli;
- membersihkan permukaan luar dan saluran ventilasi udara;
- membersihkan saluran udara sumbat pernafasan;
- periksa secara visual tidak adanya kebocoran dari segel secara visual;
- untuk unit roda gigi dengan lengan torsi, periksa penyangga karet dan mengubahnya, jika perlu.

**Setiap 20.000 jam kerja, dan setidaknya setiap 5 tahun:**

- jika versi ATEX**, ganti oli sintetis dengan oli mineral, selalu ikuti instruksi standar);
- ganti gemuk bantalan anti-gesekan dari bantalan terbuka tidak tersentuh oli (misalnya taper roller bearing dengan nilos).

## ROUTINE CHECKS

**Every 3.000 working hours, and at least every 6 months:**

- check oil level;
- clean external surfaces and the ventilation air passages;
- clean the breather plug air passage;
- check visually the absence of leakage from seals visually;
- for gear units with a torque arm, check the rubber buffer and change it, if necessary.

**Every 20.000 working hours, and at least every 5 years:**

- if ATEX version**, change synthetic oil with mineral oil, always follow standard instructions);
- replace anti-friction bearing grease of open bearings not touched by oil (for instance, taper roller bearings with nilos).

## POSISI PEMASANGAN

## MOUNTING POSITIONS

Seperti semua motor motif yang dapat dihubungkan dan gearbox, STADIO dapat dipasang di mana saja posisi tanpa menentukan apa pun urutan di dalamnya.

Semua STADIUM sudah disediakan Motive diisi dengan oli sintetik dalam jumlah yang sesuai ISOVG320 -25°C +50°C

Like all connectable motive motors and gearbox, STADIO can be mounted in any position without specifying anything in the order.

All STADIO are supplied by motive already filled by a suitable quantity of synthetic oil ISOVG320 -25°C ÷ +50°C

Di [www.motive.it](http://www.motive.it), menggunakan nomor seri pada papan nama gearbox, dimungkinkan untuk mengunduh Laporan Tes Akhir setiap unit.

On [www.motive.it](http://www.motive.it), using the serial number on the nameplate of the gearbox, it is possible to download the Final Test Report of each unit.

The screenshot shows a Mozilla Firefox browser window with the address bar containing 'Final Test Report | Motive Motors Srl - Mozilla Firefox' and the URL 'www.motivemotors.it/final-test-report/index.php?lng=spa'. The page header includes the Motive logo, company address (Via Le Ghiselle, 20, 25014 Castenedolo (BS), Italy), contact information (tel: +39 030 2677087, fax: +39 030 2677125, e-mail: motive@e-motive.it, P.IVA: 03580280174, www.e-motive.it), and language links (ITA | ENG | FRA | TED | SPA | ARA). The main content area features two images: one of a gearbox with a nameplate labeled 'motive' and 'MADE IN ITALY', and another of a robotic arm labeled 'ROBOTS A2-2' with a nameplate. Below these images are two versions of the 'final test report' document: one for 'Motors' and one for 'Gearboxes'. The 'final test report' document contains various tables and graphs related to the product's performance and testing results.

Motive mempertimbangkan klaim keluhan pelanggan di kerangka jangka waktu kewajiban penjaminan (lihat Alasan katalog), hanya jika semua kondisi penyimpanan yang ditentukan, persiapan, pengoperasian dan penggunaan diamati. Setiap pengaduan harus disertai dengan informasi nomor seri produk dan informasi relevan lainnya dan bukti.

Motive takes into consideration customer's reclamation claims in the frame of the term of guarantee obligations (see Motive catalogue), only if all prescribed conditions for storage, preparation, putting into operation and use are observed. Eventual complaints shall be accompanied by the information of the product serial number and any relevant information and evidence.
